Computer Aided Design

INDEX TO VOLUME 6

A

Adaptive control of metal-cutting using machinability equations, a hill-climbing method for 226
Adjoint network approach to the calculation of first order sensitivity coefficients, inefficiency of the 32
Aircraft project studies, CAPS: a computer-based aid 82
Analysis and lift placing in hospitals 206
Analysis of large systems, the role of sparsity 159
Architects department, integrated c.a.d. system 25
Architectural design, graphics facilities 10
Architecture, computer applications in the USA 119
Architectural practice, computers in 62
Area traffic control by computer 181

C

CAD Centre scene

Computer-aided building design 114
North West Centre 65
Pipework design and management system: PDMS 275
Star network 203

CAD in industry

Autokon Aerospace package 54
Collaboration in c.a.d. 109
Control design aids for sale 270
Costing steelwork 110
Data for modelling transistors 188
Design to building by c.a.d. 109
Digitizers 55
Drafting system sale 187
Drawings by SPEED 54
Easing load flow in power systems 270
Flowsheet simulation subroutines competition 187
Manufacturer promotes c.a.d. 270
Mastering c.a.d. 187
Mini-size n.c. language 55
Piping and pipelines systems design 110, 188
Shipping package 270
Simulating diamond etching 187
Terminals for design 188
Transformer design 188
C.a.d system 274
C.a.d. system for an architects department 25
Calculation of first order sensitivity coefficients, inefficiency of the adjoint network approach 32
CAMAC modules, WIFIC – a program to assist in the production of 136
CAPS: a computer-based aid to aircraft project studies 82
Circuit layout design system 66
Circulation analysis and lift placing in hospitals 206
Circuit design, human factors in 195
Civil engineering, optimization in 45
C.a.d. applied to finite element stress analysis 125
C.a.d., drafting and manufacture in avionics 233

C.a.d. of pumps and fans 101
C.a.d. of thermally loaded axisymmetric diesel engine components 132
C.a.d. in electronics on a small machine, system software for 213
C.a.d. spatial transforms for 140
Computer-aided network design 61
Computer-aided architectural design, graphics for 10
Computer-aided selection procedure for rolling element bearings 93
Computer applications in lines planning 179
Computer plotting, introduction to digital 271
Computer simulation of a submersible vehicle 35
Computer system 190
Computers for planning telecommunications networks 169
Comparison of two parametric surface patch methods 217

Conferences
CAM74: computer-aided manufacture and numerical control 266
Computational aspects of the finite element method 42
Computer-aided design of pumps and fans 101
Computer-aided geometric design 267
Computer applications in process development 194
Data-structures 43
Human factors in circuit design 195
ICCAS – an international conference on computer applications in the automation of Shipyard operation and ship design 44
Optimization in civil engineering 45
Tenth annual symposium of the British Cartographic Society 192

Conic lofting tile, CONSURF. Part one: introduction 243
Submersible vehicle, computer simulation of 35
CONSURF. Part one: introduction of the conic lofting tile 243
Cubic spline curve fitting with controlled end conditions 2

D

Data communication networks using simulation 171
Data-entry terminal 191
Data-structures 43
Design and specification of post-processors for programming 221
Design of data communication networks 171
Design of pumps and fans, computer-aided 101
Design of recursive digital filters, Minimax 73
Design system, integrated circuit layout 66
Design, The computer in 202
Diesel engine components, c.a.d. of 132
Digital computer plotting 271
Digital filters, synthesis 148
Discrete time systems 271
Display terminal 59, 106
Drafting and manufacture in avionics 233
Drum-plotter 58

E

Electrostatic printers/plotters 59, 190
Engineering design, techniques in 202

F

Fast response in a graphics satellite 250
Filters, Minimax design of 73
Finite element method, computational aspects of the 42
Finite element stress analysis, inexpensive, interactive c.a.d. 125
Finite element system, BERSAFE 15
Fluidic controlled submersible vehicle, computer simulation of 35

G

Geometric design, computer-aided 267
Graphic calculator 191
Graphics for computer-aided architectural design 10
Graphics, principles of 272
Graphics satellite, fast response in a 250
Graphics system 106

H

Highway design, Computer systems in 61
Hill-climbing method for adaptive control of metal-cutting 226
Hospitals, circulation and lift placing in 206

I

Incremental plotters 107
Inefficiency of the adjoint network approach 32
Inexpensive, interactive computer-aided design applied to finite element stress analysis 125
Information representation and manipulation in a computer 201
Integrated c.a.d. system for an architects department 25
Integrated circuits, interactive design system for Fourier analysis 107
Integrated circuit layout design system 66
Interactive c.a.d. applied to finite element stress analysis 125
Interactive design system 105
Interactive design system for integrated circuits 107
Interactive graphics, Principles of 272

K

Keyboard digitizing 58

L

Laser display and plotter 57, 105

Light Pen
Case for an EEC information system in c.a.d. (inside back cover April issue)
Designer and the environment (inside back cover January issue)
Finance and c.a.d. (inside back cover July issue)
Multum-in-parvo (using computer-linked microfilm systems in c.a.d.) (inside back cover October issue)

Linear programming to select an optimal set of prime implicants 211
Line-printer, medium speed 191
Lines planning, computer applications in 179
Low frequency analysis 57

M

Manipulation in a computer, information representation 201
Manufacture and numerical control, computer-aided 266
Metal-cutting of variable shapes subject to noise 230
Metal-cutting using machinability equations 226
Minimax design of recursive digital filters 73
Modelling techniques used for network systems 176

N

Network design, computer-aided 61
Networks 159, 169, 171, 176, 179, 181
Numerical control, CAM74: computer-aided manufacture 266
Numerical control programming, the design and specification of post-processors 221

O

Optimal set of prime implicants, the use of linear programming 211
Optimization in civil engineering 45
Optimizing the metal-cutting of variable shapes subject to noise 230

P

Paper Tape readers 105
Pen recorder 59
Plotter 105
Post-processor specification for n.c. programming 221
Prime implicants, selecting an optimal set 211
Process development, Computer applications in 194
Programmable v.d.u. 58, 59, 274
Pumps and fans, c.a.d. of 101

R

Recursive digital filters, of 73, 148
Remote batch processing 58, 274
Research in progress 38, 40, 98, 183, 262
Role of sparsity in the analysis of large systems 159
Rolling element bearings, a computer-aided selection procedure 93

S

Shipyard operation and ship design, ICCAS – an international conference on computer applications in the automation of 44
Sensitivity coefficients, inefficiency of the adjoint network approach 32
Simulation of a fluidic controlled submersible vehicle 35
Simulation techniques, design of data communication networks 171

Software
AMCAP: microwave circuit analysis program 60
AUTOMAT: work place layouts 108
CHEMSHARE: simulates chemical, petroleum and natural gas plants 108

CIVIL: foundation design 60
COBA: highway scheme 60
COMPAID: pipework isometrics 60
COSDIC: control system analysis and design 189
FLOWPACK: flowsheeting and evaluation 60
GIPACC: heat exchanger costing 189
GLIM: luminance and illuminance levels 60
IBES: hospital room-data 108
LISI: simulates multi-lift systems 189
MANOL: pre-design housing scheme layout 189
MCAUTOECI STRUDL: static and dynamic analysis package 189
MIFIL: designing waveguides, comblines 108
QBPV and NVAM: designs vessels 108
SLAP: (small signal linear analysis program) and NOLAP (NO Linear Analysis Program) 108
SPANDE: analysing three-dimensional frameworks 189
STRUCTURAL: preliminary and analytical design 60

Software engineering 201
Sparsity in the analysis of large systems 159
Spatial transforms for c.a.d. 140
Specification of post-processors for numerical control programming 221
Spline curve fitting 2
Submersible vehicle, Computer simulation of 35
Surface patch methods, a comparison of two 217
Synthesis of recursive digital filters 148
System, integrated circuit layout design 66
System software for c.a.d. in electronics on a small machine 213
Systems, Discrete time 271

T

Techniques in engineering design 202
Techniques of c.a.d: data-structures 256
Telecommunications networks 169
Thermally loaded diesel engine components, c.a.d. of 132

Titles

Area traffic control by computer, Wilson, G. 181
BERSAFE finite element system, Hellen, T. K. et al. 15
CAPS: a computer-based aid to aircraft project studies, Crookes, W. A. et al. 82
Circulation analysis and lift placing in hospitals, Shirley, E. 206
Comparison of two parametric surface patch methods, Sadeghi, M. M. 217
Computer-aided design, drafting and manufacture in avionics, Allen, C. 233
Computer-aided design of thermally loaded axisymmetric diesel engine components, Tomlinson, G. R., et al 132
Computer-aided selection procedure for rolling element bearings, Ellis, J. 93
Computer applications in lines planning, Bailey, B. T. 179
Computer simulation of an ideal fluid, constant depth, fluidic controlled submersible vehicle, Wu, C. et al. 35
CONSURF. Part one: introduction of the conic lofting tile. Ball, A. A. 243
Cubic spline fitting with controlled end conditions, Adams, J. A. 2
Design and specification of post-processors for numerical control programming, Sim, R. M. 221
Design of data communication networks using simulation techniques, Price, W. L. 171
Fast response in a graphics satellite, Kilgour, A. C. 250
Graphics facilities for computer-aided architectural design, Sussock, H. 10
Graphs and networks, Oldfield, J. V. 154
Hill-climbing method for adaptive control of metal-cutting using machinability equations, Burns, R. N. 226
Inefficiency of the adjoint network approach to the calculation of first order sensitivity coefficients, Neill, T. B. M. 32
Inexpensive, interactive computer-aided design applied to finite element stress analysis, Grindley, R. E. et al. 125
Integrated c.a.d. system for an architects department, Paterson, J. W. 25
Integrated circuit layout design system, Sugiyama, N. 66
Minimax design of recursive digital filters, Charalambous, C. 73
Modelling techniques used for network systems, Malcomson, E. 176
Network design symposium, introduction, R. H. Davis 153
Optimizing the metal-cutting of variable shapes subject to noise, Burns, R. N. 230
Problems in using computers for planning telecommunications networks, Galpin, I. F. 169
Role of sparsity in the analysis of large systems, Brameller, A. et al 159
Spatial transforms for c.a.d., Grover D. J. 140
Synthesis of recursive digital filters, Balakrishnan, P. 148
System software for c.a.d. in electronics on a small machine, Dubock, P. A. et al 213
Techniques of c.a.d.: data-structures, Shave, M. J. R. 256
Through the looking glass: why no wonderland, Eastman, C. E. 119
Use of linear programming to select an optimal set of prime implicants, Chambers, P. 211
WIFIC – program to assist in the production of CAMAC modules, Dunford, K. et al 136

Traffic, area control by computer 181

V

Variable shapes subject to noise, optimizing the metal-cutting of 230
Visual display unit 58, 59, 106, 191, 274

W

WIFIC – a program to assist in the production of CAMAC modules 136
